

Submission Database Interface

Starting point: The movie database has now been submitted and works via WAMP on localhost.

Assignment: Develop an application that allows you to interact with your database as you normally would through phpMyAdmin.

BUT FIRST:

1. Create a Usecase Diagram (UML)
2. Create a High Level Design
3. Create an Activity Diagram (UML)
4. Use the requirements below to build your application in **a language of your choice, BUT NOT PHP**

Develop an application based on the following functional requirements:

No	Requirement
1	Show the contents of a table from the database
2	Adding a record to the database
3	Deleting a record from the database
4	Edit a record from the database
